- ☐ To be able to maintain their colour under UV rays
- ☐ To resist multiple FLT impacts
- ☐ Fire Resistant
- ☐ Scratch Resistant
- ☐ Mold Resistant
- ☐ Recyclable
- ☐ Recycled
- ☐ Chemical Resistant
- ☐ Coloured Material; No Repainting Required
- ☐ Freezer Grade
- ☐ Non-Toxic
- ☐ PAS 13 Compliant

PURCHASING YOUR BARRIERS

4 signs that you need to replace your barriers as soon as possible...

YOU HAVE AN UPCOMING HIGH PROFILE INSPECTION ☑

It is important to comply with standards and regulations. Whether you are having a Health & Safety inspection, or just have a VIP visit from your organisation, showing you are investing in the safety of your employees, shows you are a site that is leading the path for other sites in your company to follow..

THERE IS VISIBLE DAMAGE OR FLAWS ☑

If you see any scratches, bends or gashes in the barriers, this means they have been compromised and will not give the impact resistance rating that they said they would when you purchased them.. This poses a risk to any pedestrians or assets that the barriers were designed to protect.

YOU HAVE HAD A MHE INCIDENT ☑

It is crucial to consider introducing/ replenishing your barriers when you have had a pedestrian injured, as costly fines are likely, especially when the accident could have been avoided by having sufficient barriers in place. Showing your employees that you care about their safety, also helps improve their morale.

THEY ARE DIFFICULT TO CLEAN / ALWAYS LOOKS DIRTY ☑

Barriers that are dirty, are hard to see. And barriers that are hard to clean, are always ultimately left dirty. It is important that Forklift Truck drivers can see where the pedestrian segregation barriers are, to ensure they always drive with caution in those areas.

2. Notes / Quote Brief

what barriers do you require?

Max Speed of FLT (km/h):

FLT Weight (Tonnes):
